

# ASSET INVENTORY SYSTEM

THE AUTOMATED OVERALL SOLUTION

# PROFITABILITY FACTOR – ASSET INVENTORY SYSTEM

It's an absolute certainty that the keywords "asset inventory" immediately conjure up the following pictures to you: pile upon pile of files, every folder jam packed with lists of never-ending figures set in columns. Or employees with pencils and bulky lists scurrying from machine to machine and from PC to office chair to then jot down every inventory number by hand – nor forgetting the transposed digits. Or it makes you think of the time it will take to update each individual record in your SAP system at the end of it all.

A thing of the past! The Freudenberg IT (FIT) asset inventory system transforms the previously nerve-wracking "asset inventory" into simple child's play. The automated overall solution optimizes error-prone and extremely unprofitable workflows for capturing, reconciling and processing asset portfolios.

## **What does the Freudenberg IT asset inventory system offer you?**

The advantages are numerous! It saves you time and money! And it makes you completely flexible. It's up to you whether you decide on a universal census on a specific cutoff date or carry out a rolling inventory at any time. The inventory is always simple, fast and ties up very few personnel. State-of-the-art technology and standardized interfaces enable you to optimally integrate the asset inventory system into your existing data processing system and organizational workflows. All the software and hardware required is naturally available in one stop.

The FIT asset inventory system increases your inventory results' timeliness, quality and significance. Quickly assigning new cost centers, business locations or rooms

when relocating assets is no problem, meaning that you always have a simple and convenient overview of your fixed assets.

This also allows you to make reliably plans and calculations. For there's one thing you should never forget: your asset inventory results determine your write-off options and thus, in turn, your profit.

## **How does the asset inventory system work? Simply and securely!**

The system core is a user-friendly, intuitively operable Windows application on your PC, into which you import the asset master data of your asset management system.

## **Then things really take off!**

You attach barcode labels containing the asset master data to all your assets. The thermo transfer printer needed to print the labels is provided by FIT. You then conveniently scan in your asset data using a handy little portable laser terminal – and completely free of transposed numbers. You can even annotate the data straight after scanning them in. The data transfer station delivered at the same time transfers

Heidelberger Druckmaschinen AG  
Uwe Jüttner, Head of Asset Accounting

"Adopting the SAP-based Freudenberg IT asset inventory system has enabled us to reduce the time, personnel and financial resources usually required for the annual asset inventory by two thirds. The quality of the asset management has been improved due to the perceptibly increased accuracy of the inventory results coupled with flawless documentation. The system has made a positive impression on us and will therefore be extended to other companies within the Heidelberg-Gruppe in the medium term."

Airbus  
Günter Jörgens, Manager of Fixed Asset Accounting/  
Dieter Ippisch, Financials

"We were quickly persuaded by the professional and simple operation of Freudenberg IT's asset inventory system. With this product, we were able to noticeably reduce the effort required for our asset inventory and at the same time increase quality. Today, we are using this software at different Airbus European locations."

everything into your PC's asset inventory system.

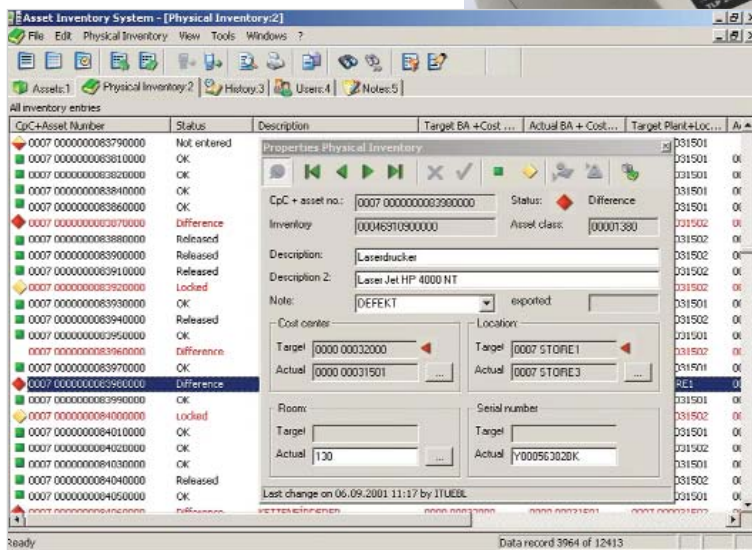

Now you can view the inventory result at the press of a button. The software posts any differences and enables you to immediately revise the inventory data. If necessary, some cost centers and business locations can be quickly changed, the inventory data then released and retransferred back into the asset inventory system. And that's it!

This transfer is reliably and securely taken care of by the certified interface to SAP; after all, you don't want any office chairs to be "brushed under the carpet". Every asset management system can be linked via the open interface on a file basis.

### Already well and truly established: Freudenberg IT and its asset inventory system

The asset inventory system developed and constantly improved by FIT is well established on the market and has more than proved itself with renowned customers both at home and abroad. FIT manufactures the software for its successful system in-house, meaning that your individual requirements can be taken into consideration.

In short: The Freudenberg IT system is the automated overall solution to your complete asset inventory. As part of the globally active Freudenberg Group Freudenberg IT is an IT service provider with origins steeped in tradition, a strong partner that won't let its customers down either now or in the future. The company's experts will still be reliably assisting and supporting you and providing you with system maintenance in future years and decades.
